PROFESSIONAL SUMMARY

Cloud & DevOps Engineer with hands-on expertise in AWS (EC2, VPC, IAM, S3, CloudWatch), Terraform infrastructure-as-code, Docker/Kubernetes containerisation, and Jenkins/GitHub Actions CI/CD pipelines. Extends core DevOps skills into AI agent development — building multi-agent systems with Google ADK, Vertex AI, and Gemini 2.5 Flash. Proven ability to design, automate, and monitor production-grade cloud infrastructure from the ground up.

TECHNICAL SKILLS

Cloud (AWS): EC2, S3, IAM, VPC, ALB, Lambda, Auto Scaling, CloudFront
Containers: Docker (Dockerfile, Image Build, Docker Hub), Kubernetes (Pods, Deployments, Services, kubectl)
CI/CD: Jenkins, GitHub Actions, Pipeline Automation, Webhook Integration
IaC: Terraform — Modules, Remote State, Cloud Provisioning
AI & Agents: Google ADK, Vertex AI, Gemini 2.5 Flash, Multi-Agent Orchestration
OS & Scripting: Linux (Ubuntu, RHEL) — User Management, Permissions, Bash Scripting
Monitoring: AWS CloudWatch — Dashboards, Logs, Alerting, High Availability
Networking: VPC, Subnets, NAT Gateway, Security Groups, IAM Roles/Policies, ALB
Version Control: Git, GitHub, Docker Hub, AWS CLI, kubectl

PROJECTS

AI Helpdesk Agent System

[Python](#) | [Google ADK](#) | [Vertex AI](#) | [Gemini 2.5 Flash](#) | [Multi-Agent Orchestration](#)

- Architected an AI-powered IT helpdesk using Google ADK and Gemini 2.5 Flash with specialised sub-agents for ticket classification, troubleshooting, and escalation — enabling near-zero-touch resolution of common IT requests.
- Built a multi-agent orchestration layer routing tickets to domain-specific agents (network, hardware, software), significantly reducing manual triage overhead.
- Deployed the inference pipeline on Vertex AI for scalable, production-ready model serving with structured tool-use and function-calling patterns.

File & Folder Automation Agent

[Python](#) | [Google ADK](#) | [Agent Tool Design](#) | [Function Calling](#)

- Built a Google ADK agent that executes create, rename, delete, and update file/folder operations via natural language, demonstrating practical agentic tool-use design.
- Defined custom tool schemas within the ADK framework, gaining first-principles understanding of function-calling patterns used in modern AI agent pipelines.

Terraform AWS Infrastructure Automation

[Terraform](#) | [AWS EC2](#) | [S3](#) | [VPC](#) | [IAM](#) | [CloudWatch](#) | [GitHub Actions](#)

- Provisioned repeatable, version-controlled AWS infrastructure (EC2, VPC, IAM, S3) using Terraform modules with remote state, eliminating configuration drift across environments.
- Wired GitHub Actions CI/CD to trigger Terraform plans and applies on push — achieving fully automated cloud provisioning with zero manual CLI intervention.
- Configured CloudWatch dashboards and metric alarms to detect and alert on infrastructure health issues within minutes of occurrence.

Automated CI/CD Pipeline — Jenkins, Docker & GitHub Actions

[Jenkins](#) | [Docker](#) | [GitHub](#) | [GitHub Actions](#) | [Webhook Integration](#)

- Designed an end-to-end CI/CD pipeline with Jenkins multi-stage builds and GitHub Actions triggered automatically via webhooks on every commit, cutting deployment time from manual hours to minutes.
- Containerised the application using Docker ensuring environment-agnostic, reproducible builds across dev, staging, and production with zero environment-mismatch failures.

AWS Highly Available Web Application

[AWS EC2](#) | [ALB](#) | [Auto Scaling](#) | [VPC](#) | [S3](#) | [CloudWatch](#)

- Deployed a fault-tolerant web application on EC2 with an Application Load Balancer and Auto Scaling group, maintaining uptime during simulated traffic spikes and instance failures.
- Engineered a secure multi-tier VPC with public/private subnets, NAT Gateway, and fine-grained Security Groups, achieving full network isolation across application tiers.

■ Implemented end-to-end observability with CloudWatch metrics, structured logs, and alarms to surface issues before they impacted end users.

EDUCATION

B.E. in Computer Science and Engineering — Kammavari Sangham Institute of Technology, Bengaluru

2021 – 2025 | CGPA: 7.9 / 10

TRAINING & CERTIFICATIONS

Cloud Computing Master Training — Besant Technologies, Bengaluru

Hands-on training covering AWS, Docker, Kubernetes, Jenkins, Terraform, CI/CD pipelines, and Linux administration.
